TECTONOPHYSICS—Volume 211—No. 1–4

Special Issue

EARTHQUAKE SOURCE PHYSICS AND EARTHQUAKE PRECURSORS

Papers from International Symposium on Earthquake Source Physics and Earthquake Precursors, Held in Tokyo, Japan, November 19–22, 1990

Edited by

TAKESHI MIKUMO

Research Centre for Earthquake Prediction, Disaster Prevention Research Institute, Kyoto University, Uji, Kyoto 611, Japan

KEIITI AKI

Department of Geological Sciences, University of Southern California, Los Angeles, CA 90089-0740, USA

MITIYASU OHNAKA

Earthquake Research Institute, University of Tokyo, Bunkyo-ku, Tokyo 113, Japan

LARRY J. RUFF

Department of Geological Sciences, University of Michigan, Ann Arbor, MI 48109, USA

PAUL K.P. SPUDICH

U.S. Geological Survey, 345 Middlefield Road, Menlo Park, CA 94025, USA

CONTENTS

Preface vii
Opening address
K. Mogi (Chiba, Japan) xi

Seismic Observation and Analysis
Higher-order interrelations between seismogenic structures and earthquake processes
K. Aki (Los Angeles, Calif. USA) 1
The bright spot of an earthquake
Y. Umeda (Kyoto, Japan) 13

Influence of asperities along subduction interfaces on the stressing and seismicity of adjacent areas
R. Dmowska and L.C. Lovison (Cambridge, Mass., USA) 23
Waveform inversion for rupture process using a non-flat seafloor model: application to 1986 Andreanof Islands and 1985 Chile earthquakes
S. Yoshida (Tokyo, Japan) 45
Asperity distributions and large earthquake occurrence in subduction zones
L.J. Ruff (Ann Arbor, Mich., USA) 61
On relations between earthquake population and asperity population on a fault
A.A. Gusev (Petropavlovsk-Kamchatsky, USSR) 85
On the inference of absolute stress levels from seismic radiation
P.K.P. Spudich (Menlo Park, Calif., USA) 99
Strain drop and apparent strain for large earthquakes
M. Kikuchi (Yokohama, Japan) 107

Theoretical and Numerical Modelling
Earthquake nucleation on faults with rate- and state-dependent strength
J.H. Dieterich (Menlo Park, Calif., USA) 115
Slip-dependent friction law and nucleation processes in earthquake rupture
M. Matsu'ura, H. Kataoka and B. Shibazaki (Tokyo, Japan) 135
Earthquake source nucleation: a physical model for short-term precursors
M. Ohnaka (Tokyo, Japan) 149
Precursory surface deformation expected from a strike-slip fault model into which rheological properties of the lithosphere are incorporated
T. Yamashita and M. Ohnaka (Tokyo, Japan) 179
Dynamic fault rupture and stress recovery processes in continental crust under depth-dependent shear strength and frictional parameters
T. Mikumo (Kyoto, Japan) 201
Numerical simulation of three-dimensional faulting processes with heterogeneous rate- and state-dependent friction
T. Miyatake (Tokyo, Japan) 223
Temporal variations in seismic event rate and *b*-values from stress corrosion constitutive laws
I.G. Main (Edinburgh, UK), P.G. Meredith and P.R. Sammonds (London, UK) 233

Experimental and Geological Studies
Fracture nucleation process in intact rocks
H. Yukutake (Osaka, Japan) 247
Confirmation of two types of fracture in granite deformed at temperatures to 300°C
M. Shimada (Takatsuki, Japan) 259
Strain-rate effect on frictional strength and the slip nucleation process
N. Kato, K. Yamamoto, H. Yamamoto and T. Hirasawa (Sendai, Japan) 269
Implications of fault-valve behaviour for rupture nucleation and recurrence
R.H. Sibson (Dunedin, New Zealand) 283
The change in orientation of subsidiary shears near faults containing pore fluid under high pressure
J. Byerlee (Menlo Park, Calif., USA) 295
Relationships between sliding behavior and internal geometry of laboratory fault zones and some creeping and locked strike-slip faults of California
D.E. Moore and J. Byerlee (Menlo Park, Calif., USA) 305
About the potential of wells to reflect stress variations within inhomogeneous crust
H.-J. Kümpel (Kiel, FRG) 317
Transient electrical activity accompanying rock under indentation loading
Y. Enomoto (Ibaraki, Japan) and H. Hashimoto (Tokyo, Japan) 337
